

## Scenario 3

### Questions

1.	<b>Initiation/Requirement Gathering:</b> <ul style="list-style-type: none"><li>• At this stage, the BA works closely with stakeholders at Website Services Inc. to understand their business goals, needs, and requirements for the software project.</li><li>• They conduct interviews, workshops, and surveys to gather comprehensive requirements.</li><li>• BAs document these requirements in detail, ensuring clarity and accuracy for the development team.</li></ul>
2.	<b>Planning:</b> <ul style="list-style-type: none"><li>• The BA collaborates with project managers, developers, and other stakeholders to define project scope, objectives, timelines, and resource allocation.</li><li>• They help prioritize requirements based on business value and feasibility.</li><li>• BAs create a detailed project plan, outlining tasks, milestones, and deliverables.</li></ul>
3.	<b>Design:</b> <ul style="list-style-type: none"><li>• In this phase, BAs translate gathered requirements into functional specifications and system design documents.</li><li>• They work with designers and architects to ensure the solution aligns with business needs and technical constraints.</li><li>• BAs may create wireframes, mock-ups, or prototypes to visualize the solution for stakeholders' feedback.</li></ul>
4.	<b>Development:</b> <ul style="list-style-type: none"><li>• BAs serve as a bridge between the development team and business stakeholders, clarifying requirements and addressing any ambiguities.</li><li>• They participate in agile ceremonies like sprint planning, daily stand-ups, and sprint reviews to ensure the development progress aligns with business objectives.</li><li>• BAs conduct requirement walkthroughs with the development team to ensure everyone has a clear understanding of what needs to be built.</li></ul>
5.	<b>Testing:</b> <ul style="list-style-type: none"><li>• BAs collaborate with QA analysts to develop test cases and scenarios based on documented requirements.</li><li>• They participate in testing activities, validating that the developed software meets the specified requirements and user acceptance criteria.</li><li>• BAs facilitate user acceptance testing (UAT) sessions, gathering feedback from stakeholders and ensuring any necessary adjustments are made.</li></ul>
6.	<b>Deployment/Implementation</b> <ul style="list-style-type: none"><li>• BAs work closely with the deployment team to ensure a smooth transition from development to production.</li><li>• They may assist in creating user documentation, training materials, and providing training sessions to end-users.</li><li>• BAs ensure that the deployed solution meets the initial business requirements and expectations.</li></ul>

- 

#### 7. **Maintenance and Support:**

- Even after the software is deployed, BAs continue to play a role in maintaining and supporting the application.
- They gather feedback from users and stakeholders to identify areas for improvement or additional features.
- BAs prioritize enhancement requests and work with the development team to implement changes while ensuring they align with the overall business strategy.
